

## The Line

The Line is a 170-kilometer-long smart city that is being built in the desert of Saudi Arabia. It is designed to be a sustainable and carbon-neutral community, with a focus on human well-being and environmental protection.

**The Line is designed to be powered by 100 % renewable energy, including solar and wind power. The city will also have a state-of-the-art energy storage system that will allow it to store excess energy generated during the day and use it at night.**
